

# Creating Innovative Mobile Solutions for the Window Industry

## Mobile Surveyor

### KEY FEATURE:

#### Automatic Dimension Calculations

Measuring for bay windows has always been difficult and error-prone. Mobile Surveyor guides a surveyor to only measure those dimensions which are essential and most accurate to take. It then calculates all other dimensions and provides 'checking' measurements so the surveyor can be sure the replacement window is fully measured and accurate.

This feature allows the surveyor to concentrate on taking accurate measurements rather than calculating final frame sizes.

Mobile Surveyor calculates :

- External aperture dimensions
- Internal aperture dimensions
- Optional extension sizes
- Cill/threshold size
- Tolerances for "ease"

### Efficient, Error-Free Surveys

**Inaccurate or incomplete surveys waste money and can lead to a bad customer experience. Mobile Surveyor can turn this around by eliminating survey errors, increasing survey efficiency and integrating into your other office systems to cut out keying errors and speed up order processing.**

**Mobile Surveyor has been designed by surveyors and uses the latest Windows Mobile technology on a choice of hand-held PDA devices. It's a modern tool that saves you money and gives the right image to your customers.**

### Cost Savings and Payback

Mobile Surveyor saves money in many ways:

- Elimination of survey errors means a dramatic reduction in waste product — you'll simply no longer be making or ordering windows the wrong size.
- Elimination of re-visits to capture missing survey data — because Mobile Surveyor ensures that users complete surveys, first-time, every time.
- Reduction of travel time/cost — because Mobile Surveyor receives and sends survey orders whilst users are on-the-go, there is no need to visit the office to pick up or drop off paperwork.
- More surveys done in a day — Mobile Surveyor contains productivity features to help a surveyor can do more in a day than with old pencil-and-paper methods.
- Reduction in data entry and re-keying — Mobile Surveyor links into other office systems to ensure that data is entered once only, from shared diaries to machine-shop/supplier orders.

Typically customers find they can achieve a payback period of just 6-9 months using Mobile Surveyor.

### A Day in the Life

*Dave the Surveyor switches on his mobile PDA over breakfast and downloads his day's survey jobs. Job 1 is part of a large council refurbishment contract so all the window styles are pre-loaded on his survey already. It's an easy job, made easier by the fact that he can now measure exterior dimensions on first floor windows from the ground. The job's complete in an hour and he sends the data back to the office.*

*His next job is for a private customer wanting unusual styles, some of which will need to be bought in. Mobile Surveyor lets Dave design the windows whilst on site and print out samples for the customer to approve. After selecting windows from three different suppliers, the job has been agreed and the customer is given a printed copy of the order. Dave sends the completed survey back to the office, safe in the knowledge that a complex survey has been done properly, and his customer knows exactly what's been ordered.*

*Terry, the Contracts Manager, sees the new job appear on his job queue and notices that some of the frames will need to be ordered from one of his specialist suppliers. Mobile Surveyor data is automatically formatted into the supplier's standard order form and sent off to minimise lead time.*

# Creating Innovative Mobile Solutions for the Window Industry

## Mobile Surveyor

### Special points of interest:

- Schedule your workforce/ jobs
- Configurable Product Range
- Automatic pricing
- Window design
- Automatic Dimension Calculations
- Contract Management - set up specifics for certain contracts
- Hazard and Risk Assessment Management
- Survey and Bay Window wizards
- Cut costs
- Cut wastage
- Increase productivity

### New Features in Mobile Surveyor Version 2

Mobile Surveyor version 2, available from March 2009, contains new features to extend its applicability and increase savings:

- Window Sales module — providing a simplified system for sales staff to use when estimating a job. Includes full pricing module so that accurate quotations can be generated whilst on-site.
- Window Design module — providing an easy-to-use window designer tool that provides detailed printed output so customers can see what they're getting and sign orders whilst on-site.
- Support for multiple suppliers — allowing products from multiple suppliers to be included in any survey carried out.

**Call us for a demonstration today.**

### Configuration

Mobile Surveyor is tailored to precisely meet your business needs. This will include:

- Suppliers
- Window/door styles, including diagrams
- Handles and hinges
- Extensions and trims
- Hazards and Risk Assessments
- Locking mechanisms
- Colours
- Glass combinations and patterns
- Reports
- Integration with other office systems

### Easy to Buy, Easy to Live With

- **Data2go can offer finance packages at extremely competitive rates. Finance can include software, hardware, training, support — in other words, the full solution !**
- **For companies with limited IT resources, data2go can offer a 'hosted' service where we run the system for you.**
