

Software for mobile businesses

data2go Mobile Solutions

data2go design, build and implement mobile computing software that allow businesses to improve their investment returns on existing IT systems by securely extending those applications to be available remotely from a mobile device.

Whether your applications are for commercial, logistics, technical or operational users, all businesses benefit from giving their workers the ability to operate effectively whist out of the office.

Just imagine your staff being able to do their desk-based jobs, but remotely.

Our software is designed for ease-of-use and can be tailored to meet any mobile business application requirement.

The software is designed to perform securely, in real-time over standard mobile telephone networks.

The Market for Mobile Business Applications

All businesses need to be close to their customers, suppliers and staff. Nowadays this means providing computing capability so staff can carry out their daily tasks whilst travelling.

Surveys agree that there is an increasing trend towards such 'mobile working' and that this will be one of the major future areas of IT investment.

Mobile workers improve customer service through immediate access to business data

Many business have already made a significant investment in core IT systems — from sales, to business administration and a variety of specialist operational IT systems. These are now so fundamental to the smooth running of the business that users can't do their jobs without access to the real-time corporate data such systems provide.

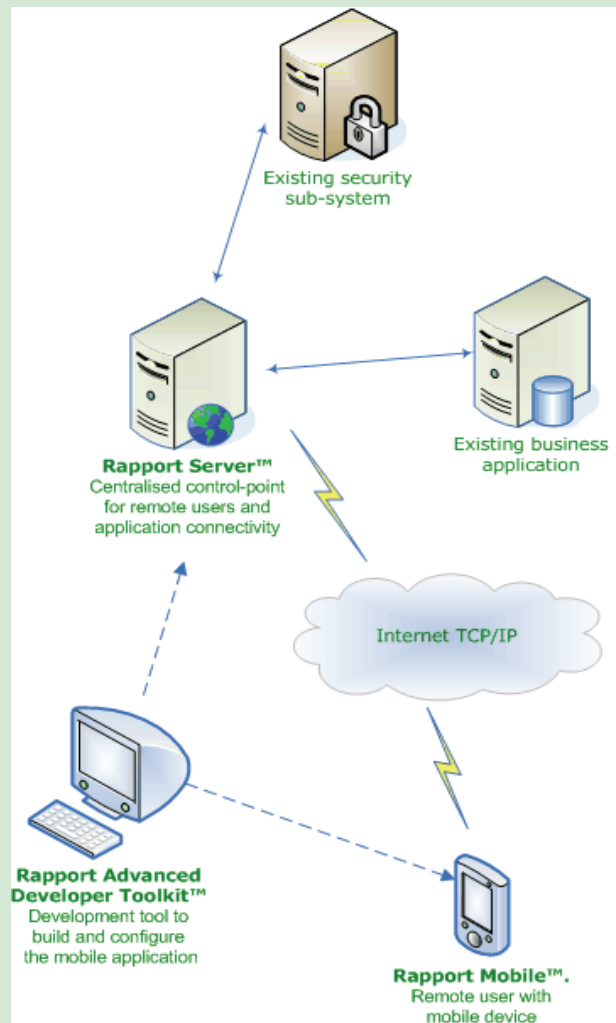

Rapport™

data2Go software comprises three components:

Rapport Server™ is the centrally-located hub of a mobile system. Its main functions are to manage user security, data connectivity, business rules and admin functions.

Rapport Mobile™ is the remote client component of a mobile system and it resides on the hand-held device of all your business users. Its main functions are to manage login security, manage network connection and provide the user interface.

Rapport Advanced Developer Toolkit™ is the development environment that allows configuration or modification of the mobile application. It provides a wizard-like method of development so is highly productive and non-technical.

Accelerators

data2go also develop **Accelerators** for common business applications which provide an out-of-the-box solution. Call us to find out about the availability of an Accelerator for your business application.

Support Services

At data2go we know that a successful implementation does not come from good software alone: our customers often need expert help to deliver training and consulting services too.

That's why we take care to establish our customers' complete needs to deliver with pride and ensure a successful result.

Quality

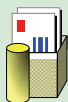

data2go software is built to the highest quality standards, using open technologies for complete future-proofing.

data2go is a Microsoft Certified Partner Company and our software is also Microsoft certified.
